Grade 11 □ Newton□s laws □ Maths and Science Lessons Both first law and third law are contained in the second law. That Is why it is called the real law. TO prove it, let us write the second law of motion, f=ma. If no external force Is applied on the object i.e. f=0, then ma=0 or a=0 as m$ \ne $0, so v=constant.

Newton's first law of motion. An object continues in a state of rest or uniform motion (motion with a constant velocity) unless it is acted on by an unbalanced (net or resultant) force. This property of an object, to continue in its current state of motion unless acted upon by a net force, is called inertia.

Newton's Second Law. Examine the relationship between acceleration, net force and mass. The larger a net force is, the larger the acceleration. In the same way, a small net force results in a small acceleration. So a small mass will have a small acceleration and a large mass also a small acceleration. Newton\s second law of motion states that an object will accelerate in the direction of the net force; the magnitude of the acceleration is directly proportional to the magnitude of the net ...
