disease (AKD) and dialysis in the very elderly. The chapters covering non pain symptoms, advance care planning, quality of life, psychological and psychiatric consideration and end-of-life care have also be completely revised to include new evidence and current thinking. This book will be of particular interest to palliative care practitioners; nephrologists, who increasingly need to know more about palliative care; nurse practitioners, dialysis nurses, social workers, dieticians, and psychiatric consultants. ABOUT THE SUPPORTIVE CARE SERIES Supportive care is the multidisciplinary holistic care of patients with chronic and life-limiting illnesses and their families - from the time around diagnosis, through treatments aimed at cure or prolonging life, and into the phase currently acknowledged as palliative care. It involves recognising and caring for the side-effects of active therapies as

well as patients' symptoms, co-morbidities, psychological, social and spiritual concerns. It also values the role of family carers and helps them in supporting the patient, as well as attending to their own special needs. Unlike traditional palliative care, which grew from the terminal care of cancer patients, supportive care is not restricted to dying patients nor to cancer. This series covers the support of patients with a variety of long-term conditions, who are currently largely managed by specialist medical teams in hospital and by primary care teams in community settings. Each volume therefore provides a practical guide to the supportive care of patients at all stages of illness. Series Editor: Sam H. Ahmedzai

chronic kidney disease (CKD), focusing on clinical diagnosis and therapeutics. CKD is a global health problem with a rising morbidity and mortality. The last decade has seen significant improvements in determining the incidence, prevalence, and complications of CKD, mainly thanks to the definitions of CKD developed by the National Kidney Foundation's Kidney Disease Outcomes Quality Initiative (K/DOQI). However, increased recognition of CKD has led to awareness of the limitations of its clinical diagnosis and treatment, which are essential to patients' wellbeing. This book is of particular value not only to nephrologists, but also to general practitioners and residents with an interest in CKD. It offers a well-organized exposition of the current knowledge base. Compared with previously published books on kidney disease and CKD, it has a smaller number of more concise
