Given the overwhelming number of ineffective economic reform policies and programs, a central question for international development concerns how significant economic change happens. In the midst of this quandary, a puzzle has been growing quietly the last two decades. Vietnam has transitioned from a poor, centrally planned economy to one of the fastest growing, market economies in the world, despite ignoring conventional reform strategies. This book focuses on solving a specific puzzle of Vietnam's transition. Its fastest growing city, Ho Chi Minh City, has a real estate industry that ranks as the worst place in the world for private capital to invest. Nevertheless, entrepreneurs have emerged to form private firms within the first decade of transition. Where did these people come from? How could they conduct business in such an inhospitable economic environment? The book finds that the transition to capitalism is neither the natural propensity of individuals nor the decision of an all-powerful state nor necessarily requires a long, evolutionary process. The major, rapid, and discontinuous economic change that occurred in Vietnam was fundamentally enabled by a social reconstruction of cognitive paradigms. The new social cognition framework accounts for why some firms were more successful than others as well as why Vietnam's capitalism has surprising characteristics.

The natural history museum is a place where the line between "high" and "low" culture effectively vanishes--where our awe of nature, our taste for the bizarre, and our thirst for knowledge all blend happily together. But as Stephen Asma shows in *Stuffed Animals and Pickled Heads*, there is more going on in these great institutions than just smart fun. Asma takes us on a wide-ranging tour of natural history museums in New York and Chicago, London and Paris, interviewing curators, scientists, and exhibit designers, and providing a wealth of fascinating observations. We learn how the first museums were little more than high-toned side shows, with such garish exhibits as the pickled head of Peter the Great's lover. In contrast, today's museums are hot-beds of serious science, funding major research in such fields as anthropology and archaeology. "Rich in detail, lucid explanation, telling anecdotes, and fascinating characters.... Asma has rendered a fascinating and credible account of how natural history museums are conceived and presented. It's the kind of book that will not only engage a wide and diverse readership, but it should, best of all, send them flocking to see how we look at nature and ourselves in those fabulous legacies of the curiosity cabinet."--The Boston Herald.

The concept of the just war poses one of the most important ethical questions to date. Can war ever be justified and, if so, how? When is a cause of war proportional to its costs and who must be held responsible? The monograph *Just and Unjust Wars* in Shakespeare demonstrates that the necessary moral evaluation of these questions is not restricted to the philosophical moral and political discourse. This analysis of Shakespeare's plays, which focuses on the histories, tragedies and Roman plays in chronological order, brings to light that the drama includes an elaborate and complex debate of the ethical issues of warfare. The plays that feature in this analysis range from Henry VI to Coriolanus and they are analysed according to the three Aquinian principles of legitimate authority, just cause and right intention. Also extending the principles of analysis to more modern notions of responsibility, proportionality and the jus in bello-presupposition, this monograph shows that just war theory constitutes a dominant theoretical approach to war in the Shakespearean canon.

A collection of stories-some well known, some more obscure- capturing some of the best storytelling of this golden age of nonfiction. An anthology of the best new masters of nonfiction storytelling, personally chosen and introduced by Ira Glass, the producer and host of the award-winning public radio program *This American Life*. These pieces-on teenage white collar criminals, buying a cow, Saddam Hussein, drunken British soccer culture, and how we know everyone in our Rolodex-are meant to mesmerize and inspire.

If you could live forever, would you want to? Both a fascinating look at the history of our strive for immortality and an investigation into whether living forever is really all it 's cracked up to be. A fascinating work of popular philosophy and history that both enlightens and entertains, Stephen Cave investigates whether it just might be possible to live forever and whether we should want to. He also makes a powerful argument that it 's our very preoccupation with defying mortality that drives civilization. Central to this book is the metaphor of a mountaintop where one can find the Immortals. Since the dawn of humanity, everyone – whether they know it or not—has been trying to climb that mountain. But there are only four paths up its treacherous slope, and there have only ever been four paths. Throughout history, people have wagered everything on their choice of the correct path, and fought wars against those who 've chosen differently. In drawing back the curtain on what compels humans to “ keep on keeping on, ” Cave engages the reader in a number of mind-bending thought experiments. He teases out the implications of each immortality gambit, asking, for example, how long a person would live if they did manage to acquire a perfectly disease-free body. Or what would happen if a super-being tried to round up the atomic constituents of all who 've died in order to resurrect them. Or what our loved ones would really be doing in heaven if it does exist. We 're confronted with a series of brain-rattling questions: What would happen if tomorrow humanity discovered that there is no life but this one? Would people continue to please their boss, vie for the title of Year 's Best Salesman? Would three-hundred-year projects still get started? If the four paths up the Mount of the Immortals lead nowhere—if there is no getting up to the summit—is there still reason to live? And can civilization survive? Immortality is a deeply satisfying book, as optimistic about the human condition as it is insightful about the true arc of history.

Futurist Faustian pact: 2075. Jeffrey Cooper, Alabama-raised design superstar in Americanized Germany, is 78 but looks 40 years younger due to the perks of his stressful job. Meeting an impulsive, gifted man will destroy the life he has painfully built for himself, but allow him to reclaim his own soul.

Immediate, intimate, portable and inexpensive, radio is the most pervasive medium in Australia. Changing Stations is the first full-scale, national history of commercial radio in Australia, from the experiments and schemes of the 1920s through to the eve of the introduction of digital radio in 2009.

Following in the wake of Chang's two other best-selling physical chemistry textbooks (Physical Chemistry for the Chemical and Biological Sciences and Physical Chemistry for the Biosciences), this new title introduces laser spectroscopist Jay Thoman (Williams College) as co-author. This comprehensive new text has been extensively revised both in level and scope. Targeted to a mainstream physical chemistry course, this text features extensively revised chapters on quantum mechanics and spectroscopy, many new chapter-ending problems, and updated references, while biological topics have been largely relegated to the previous two textbooks. Other topics added include the law of corresponding states, the Joule-Thomson effect, the meaning of entropy, multiple equilibria and coupled reactions, and chemiluminescence and bioluminescence. One way to gauge the level of this new text is that students who have used it will be well prepared for their GRE exams in the subject. Careful pedagogy and clear writing throughout combine to make this an excellent choice for your physical chemistry course.

Based on a 15-year successful approach to teaching aircraft flight mechanics at the US Air Force Academy, this text explains the concepts and derivations of equations for aircraft flight mechanics. It covers aircraft performance, static stability, aircraft dynamics stability and feedback control.

L.E. Modesitt, Jr.'s The Towers of the Sunset continues his bestselling fantasy series the Saga of Recluce, which is one the most popular in contemporary epic fantasy. Rather than accepting a marriage arranged by his mother, the powerful military matriarch of Westwind, Creslin chooses exile, setting out to find his own identity and developing his magical talents through conflict with the enigmatic white wizards of Candar. What Creslin doesn't know he stands in the way of their plot to subjugate the world. Saga of Recluce #1 The Magic of Recluce / #2 The Towers of Sunset / #3 The Order War / #4 The Magic Engineer / #5 The Death of Chaos / #6 Fall of Angels / #7 The Chaos Balance / #8 The White Order / #9 Colors of Chaos / #10 Magi ' i of Cyador / #11 Scion of Cyador / #12 Wellspring of Chaos / #13 Ordermaster / #14 Natural Order Mage / #15 Mage-Guard of Hamor / #16 Arms-Commander / #17 Cyador ' s Heirs / #18 Heritage of Cyador / #19 The Mongrel Mage / #20 Outcasts of Order / #21 The Mage-Fire War (forthcoming) Story Collection: Recluce Tales Other Series by L.E. Modesitt, Jr. The Imager Portfolio The Corean Chronicles The Spellsong Cycle The Ghost Books The Ecolitan Matter At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.
