Religious icons have been a contested terrain across the world. Their implications and understanding travel further than the artistic or the aesthetic and inform contemporary preoccupations.This book traces the lives of religious sculptures beyond the moment of their creation. It lays bare their purpose and evolution by contextualising them in their original architectural or ritual setting while also following their displacement. The work examines how these images may have moved during different spates of temple renovation and acquired new identities by being relocated either within sacred precincts or in private collections and museums, art markets or even desecrated and lost. The book highlights contentious issues in Indian archaeology such as renegotiating identities of religious images, reuse and sharing of sacred space by adherents of different faiths, rebuilding of temples and consequent reinvention of these sites. The author also engages with postcolonial debates surrounding history writing and knowledge creation in British India and how colonial archaeology, archival practices, official surveys and institutionalisation of museums has influenced the current understanding of religion, sacred space and religious icons. In doing so it bridges the historiographical divide between the ancient and the modern as well as socio-religious practices and their institutional memory and preservation. Drawn from a wide-ranging and interdisciplinary study of religious sculptures, classical texts, colonial archival records, British travelogues, official correspondences and fieldwork, the book will interest scholars and researchers of history, archaeology, religion, art history, museums studies, South Asian studies and Buddhist studies.

Each day, nearly 60 Americans receive a transplanted kidney, liver, or other organ—a literal "second chance at life"—but 11 others die waiting for an organ transplant. The number of donors, although rising, is not growing fast enough to meet the increasing demand. Intended to improve the current system of organ procurement and allocation, the "Final Rule," a 1998 regulation issued by the U.S. Department of Health and Human Services, sparked further controversy with its attempts to eliminate the apparent geographic disparities in the time an individual must wait for an organ. This book assesses the potential impact of the Final Rule on organ transplantation. It also presents new, original analyses of data, and assesses medical practices, social and economic observations, and other information on: access to transplantation services for low-income populations and racial and ethnic minority groups; organ donation rates; waiting times for transplantation; patient survival rates and organ failure rates leading to retransplantation; and cost of organ transplantation services.

Exploring the links between Large Igneous Provinces and dramatic environmental impact An emerging consensus suggests that Large Igneous Provinces (LIPs) and Silicic LIPs (SLIPs) are a significant driver of dramatic global environmental and biological changes, including mass extinctions. Environmental changes caused by LIPs and SLIPs include rapid global warming, global cooling ('Snowball Earth'), oceanic anoxia events, mercury poisoning, atmospheric and oceanic acidification, and sea level changes. Continued research to characterize the effects of these extremely large and typically short duration igneous events on atmospheric and oceanic chemistry through Earth history can provide lessons for understanding and mitigating modern climate change. Large Igneous Provinces: A Driver of Global Environmental and Biotic Changes describes the interactions between the effects of LIPs and other drivers of climatic change, the limits of the LIP effect, and the atmospheric and oceanic consequences of LIPs in significant environmental events. Volume highlights include: Temporal record of large igneous provinces (LIPs) Environmental impacts of LIP emplacement Precambrian, Proterozoic, and Phanerozoic case histories Links between geochemical proxies and the LIP record Alternative causes for environmental change Key parameters related to LIPs and SLIPs for use in environmental change modelling Role of LIPs in Permo-Triassic, Triassic-Jurassic, and other mass extinction events The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity. Its publications disseminate scientific knowledge and provide resources for researchers, students, and professionals.
