Experts know that genes play a role, and they are looking for the exact gene (s) that cause Spina Bifida. In time, research should clearly show how Spina Bifida develops so new treatments or even a cure can be developed. This research may also lead to new tests that help people or couples understand their chance of having a baby with Spina Bifida.

Genetics & Spina Bifida - Spina Bifida Association

Spina bifida is the most common type of open neural tube defect. Neural tube defects can be caused by genes passed on from both parents (inherited). They also can be caused by environmental factors like obesity or uncontrolled diabetes in the mother, and by some prescription medicines.

Spina Bifida - Developmental and Behavioral Pediatrics ...

Spina bifida is a complex condition that is likely caused by the interaction of multiple genetic and environmental factors. Some of these factors have been identified, but many remain unknown. Changes in dozens of genes in individuals with spina bifida and in those of their mothers may influence the risk of developing this type of neural tube defect.

Spina bifida: MedlinePlus Genetics

Spina Bifida is a congenital disorder that comes under the category of neural tube defects which is characterized by underdevelopment of the spinal cord and the spine. A neural tube defect occurs when the neural tube fails to close or does not close properly. (1)

The exact cause of spina bifida is not known. It likely involves multiple factors: genetic, nutritional and environmental. Previous research has established that folic acid, known as vitamin B9, can halve the risk of spina bifida when taken by women prior to conception of a child.

New Grant Seeks to Fill Knowledge Gaps Regarding Spina Bifida

The worldwide incidence of neural tube defects (NTDs) ranges from 1.0 to 10.0 per 1,000 births with almost equal frequencies between two major categories: anencephaly and spina bifida (SB).

Epidemiologic and genetic aspects of spina bifida and ...

Spina bifida is a birth defect in which there is incomplete closing of the spine and the membranes around the spinal cord during early development in pregnancy. There are three main types: spina bifida occulta, meningocele and myelomeningocele. The most common location is the lower back, but in rare cases it may be in the middle back or neck.

Spina bifida - Wikipedia

School years provide a tremendous and vital opportunity to develop qualities and skills that promote social progress. During these important years, children learn to interact in a broadening arena of school and community activities. The specific ways that Spina Bifida and hydrocephalus influence social development are not yet fully understood, but school interactions are a vital and often challenging part of that growing process.
