the one we're only now recovering from."

~~The Fate of the Species Home | Facebook~~

Scientific American executive editor Guterl begins by discussing mass extinction, a process that has occurred half-a-dozen times over life's 2.5-billion-year history, eliminating up to 90 percent of species. The survivors thrived, and the current mass extinction (already in progress) may not eliminate the human species, but the consequences will be dismal.

~~THE FATE OF THE SPECIES | Kirkus Reviews~~

In the history of planet earth, mass species extinctions have occurred five times, about once every 100 million years. A "sixth extinction" is known to be underway now, with over 200 species dying off every day. Not only that, but the cause of the sixth extinction is also the source of single biggest threat to human life: our own inventions.

In addition to bird species, four-legged, grounded animals face a similar fate. The Peninsula bighorn sheep, which roam hundreds of square miles and seasonally migrate through the U.S.-Mexico border, are just one such species that Stanford biologist Rodolfo Dirzo said in a university Q&A could be “genetically doomed.”
