Just like the physical immune system in your gut is supposed to separate nutrients from toxins and to ideally only absorb what is truly supportive and nourishing for your organism (while excreting all the rest), your psychic immune system is supposed to separate all thoughts, beliefs, emotions and behaviors – your own or those thrown at you from other people – into nourishing and toxic and ideally to only absorb the former, while excreting the latter.

The Psychic Immune System theorizes the existence of a hidden variable that acts via both unconscious and conscious processes to protect humans individually and collectively from mortal threats. Much like the physical immune system, the psychic immune system scans for danger, protects, heals, and ensures human safety and survival. Kroth argues that it isn't just luck that has enabled people to survive the multitude of epidemics, wars, and environmental disasters that could have resulted in extinction, but rather the work of a complex system that has enabled us to survive. Scrutinizing a variety of past and present threats, Kroth points to traces of a systematic force that has protected humans. Recommended for scholars of psychology, history, and political science."

This book is about how we can deepen our understanding of subjectivity through the use of the concept of triangulation. Fundamentally, this book seeks to address the question of how we can be objective about subjectivity. If psychology, as a scientific discipline, is concerned with the study of human experience, which is essentially subjective; then we are faced with the problem of how apply the scientific method, as it is commonly understood. If experience is essentially unique to the experimenter, then there seems to be a basic incompatibility with the scientific method. As currently practised, this method searches for psychic phenomena, which can be validly measured e.g. intelligence; showing a range of individual differences. But this does not enable us to examine individual experience. An individual's experience seems to become impenetrable because generalisation across different individuals' experience entails the loss of individuality in the generalisation

It has been almost twenty years since DSM-III created a major shift in psychiatric classification procedures and in diagnostic and treatment practice by introducing the multi-axial system and, for our patients specifically, the Axis II: Personality Disorders. Researchers and clinicians were forced to focus on many issues related to the field of personality and its disorders. This meant an immense impetus for research, both empirical and theoretical. Many recent developments are described in this book, as reviews or as original articles. This book also covers developments in Europe as well as in North America. Important questions still remain unanswered, such as: What is the relationship between the different clusters: A, B, & C? Are we talking about dimensions, categories, or typologies? What can be done for patients who have more than one personality disorder? Is a pro typical approach required? Consequently, is a multiconceptual approach in treatment and research required? The authors contribute to this discussion and provide guidelines for further thinking in research and treatment planning. For clinicians, it is of major importance to know whether the disorder can be influenced by treatment, and whether permanent change is really possible. A very important question is whether a person indeed has a personality disorder, and how this diagnosis affects clinical practice.

With all the enormous resources that are invested in medicine, it is sometimes a mystery why

there is so much sickness still in evidence. Our life span, though higher than at any time in history, has now leveled off and has not significantly increased in the last two generations. There is a one-third increase in long-term illness in the last 20 years and a 44% increase in cancer incidence, which are not related to demographic issues. In some modern countries, the level of morbidity (defined as days off work because of sickness) has increased by two thirds in this time. Despite \$1 trillion spent on cancer research in 20 years, the "War On Cancer" has recently been pronounced a complete failure by the u. s. President's Cancer Panel. Evidently we still have a long way to go. The goal of "Health for All by the Year 2000" as the World Health Organization has put it, is another forgotten dream. As ever, the answer will be found in breaking out of the old philosophical patterns and discovering the new, as yet unacceptable concepts. The problems of medicine today require a Kuhnian breakthrough into new paradigms, and new ways of thinking. And these new ways will not be mere variations of the old, but radical departures. This book, and the conference upon which it was based, is part of a search for these new pathways.
