Many people make carbohydrate-rich foods the foundation of their diets. If you are one of them, choose the right carbs. Switch your pastas and breads from white to whole-grain, swap white potatoes for yams or beans, and explore new grains like quinoa. Aim for high-fiber carbohydrate sources — they tend to be high-quality.

In *The Many Faces of Science*, Leslie Stevenson and Henry Byerly masterfully, and painlessly, provide the information and the philosophical reflections students need to gain an understanding of the institution of modern science and its increasing impact on our lives and cultures. In this second edition, the authors update topics they explored in the first edition, and present new case studies on subjects such as HIV and AIDS, women in science, and work done in psychology and the social sciences. The authors also extend their discussion of science and values, in addition to revising their study of science and technology to emphasize changes in scientific practice today. Accessible and rich with case studies, anecdotes, personal asides, and keen insight, *The Many Faces of Science* is the ideal interdisciplinary introduction for nonscientists and scientists in courses on science studies, science and society, and science and human values. It will also prove useful as supplementary reading in courses on science and philosophy, sociology, and political science.

For almost a century the concept of guilt, as embedded in drive theory, has dominated psychoanalytic thought. Increasingly, however, investigators are focusing on shame as a key aspect of human behavior. This volume captures a range of compelling viewpoints on the role of shame in psychological development, psychopathology, and the therapeutic process. Donald Nathanson has assembled internationally prominent authorities, engaging them in extensive dialogue about their areas of expertise. Concise introductions to each chapter place the authors both historically and theoretically, and outline their emphases and contributions to our understanding of shame. Including many illustrative clinical examples, the book covers such topics as the relationship between shame and narcissism, shame's central place in affect theory, psychosis and shame, and shame in the literature of French psychoanalysis and philosophy.

Understanding the Many Faces of Human Security: Perspectives of Northern Indigenous Peoples addresses different aspects of human security threats upon the indigenous peoples of the North: the Ainu, Inuit, Nenets, Sámi and the Mongolian indigenous herders.

This title is part of a series that aims to present timely, scholarly work on multiple levels of analysis, multi-level theory, research, and methods. The focus is on 'critical essays', theoretical work, empirical studies, methodological developments, analytical techniques, and philosophical treatments.

Each one of us has a medley of "faces" that composes our individual personality: intelligence, anger, love, jealousy, helplessness, courage, and many more. We're often quick to judge these characteristics as either positive or negative, without recognizing that we need each of them in order to become fuller, more balanced human beings. Originally written in 1978 by renowned psychotherapist Virginia Satir, the timeless classic *Your Many Faces* has been updated and reissued—and is as relevant today as ever. In a refreshingly candid style, Satir takes us on a lively and insightful journey of self-discovery and transformation. We learn how to acknowledge, understand, and manage our many faces—and in doing so, open up a world of possibilities for ourselves. This new edition also features a compelling foreword by Mary Ann Norfleet, PhD, which explores Satir's pioneering approaches to psychology and her enduring legacy in the field of family therapy.

An essential guide to the intractable public debates about the virtues and vices of economic globalization, cutting through the complexity to reveal the fault lines that divide us and the points of agreement that might bring us together. Globalization has lifted millions out of poverty. Globalization is a weapon the rich use to exploit the poor. Globalization builds bridges across national boundaries. Globalization fuels the populism and great-power competition that is tearing the world apart. When it comes to the politics of free trade and open borders, the camps are dug in, producing a kaleidoscope of claims and counterclaims, unlikely alliances, and unexpected foes. But what exactly are we fighting about? And how might we approach these issues more productively? Anthea Roberts and Nicolas Lamp cut through the confusion with an indispensable survey of the interests, logics, and ideologies driving these intractable debates, which lie at the heart of so much political dispute and decision making. The authors expertly guide us through six competing narratives about the virtues and vices of globalization: the old establishment view that globalization benefits everyone (win-win), the pessimistic belief that it threatens us all with pandemics and climate change (lose-lose), along with various rival accounts that focus on specific winners and losers, from China to America's rust belt. Instead of picking sides, *Six Faces of Globalization* gives all these positions their due, showing how each deploys sophisticated arguments and compelling evidence. Both globalization's boosters and detractors will come away with their eyes opened. By isolating the fundamental value conflicts—growth versus sustainability, efficiency versus social stability—driving disagreement and show where rival narratives converge, Roberts and Lamp provide a holistic framework for understanding current debates. In doing so, they showcase a more integrative way of thinking about complex problems.

This collection of original papers by an international group of distinguished philosophers of science impressively demonstrates the links among the philosophic points of view, areas of focus, and methods of treatment used in examining the many facets of scientific inquiry. It will be an indispensable collection for philosophers of science and scientists of various disciplines, including physicists, neuroscientists, and psychologists.

Multilingualism has become an increasingly common global phenomenon especially in the last two decades. Therefore, multilingual programmes have now been regarded as a cornerstone of education systems in many countries around the world. Learning multiple languages helps us plug into a globalised world and strengthen links with a multitude of speakers from a diversified reality we live in. Thanks to the researched cases described in the chapters, further developments aimed at fostering multilingual practices in the contemporary world will be enhanced. The chapters included in the present volume, provide an overview of current theory, research and practice in the field. They deal with such prominent research topics as multilingual education, language policies, language contact, identity of multilingual speakers, to name only a few. The selected chapters focus on the numerous and heterogeneous relations between languages. They also incorporate a series of contextualized studies with diverse research designs applied in different settings across the globe. This volume constitutes a pivotal reference source for the latest scholarly material on multilingualism from twelve different countries. It is a thought-provoking collection that provides a series of rich insights into the way multilingualism is practised in international contexts. It is ideally designed for academics, upper-level students, educators, professionals and practitioners seeking linguistic and pedagogical guidance on multilingualism.
