This second edition of Microeconomics is filled with learning-by-doing problems that give students a chance to make economics their own. These fully worked-out problems provide a step-by-step road map to help students solve numerical problems. Each problem correlates to similar practice problems at the end of each chapter. In addition, the authors include many extensive real-world examples in the text. These examples are contemporary applications of the theory and are longer and more extensive to show the evolution of the example. Each chapter opens with an example to draw readers into the topic. Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies.Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools.It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook.This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.Robert J. BlackwellAssistant Secretary for Maritime Affairs

This new volume in the venerable Organic Reactions series comprises two chapters written in part by the inventors of the unique and important name reactions discussed in these chapters. The first chapter describes a truly remarkable transformation of carboxylic acid derivatives into heteroatom-substituted cyclopropanes, now known as Kulinkovich Cyclopropanation. The second chapter represents an homage to one of the giants of organic chemistry, Sir Derek H. R. Barton. This chapter covers the radical deoxygenation of secondary alcohols that has become known as the Barton-McCombie Reaction.
